## Prof Ripley, r-devel:

The Sparc hardware used for CRAN died during an unplanned power outage, and it seems unlikely it can be resurrected.

- > Supports bioRxiv (maybe arXiv in the future)

A screenshot of the Papr app's main screen. On the left, there is a large rectangular area containing a paper abstract. The abstract starts with "Stochastic Models f..." and discusses cell growth and division. On the right side of the abstract, there is a vertical list of four rating options, each preceded by a blue hand icon with a curved arrow indicating a swipe direction. The ratings are: "Exciting and Probable" (swipe up), "Exciting and Questionable" (swipe up), "Boring and Probable" (swipe down), and "Boring and Questionable" (swipe down).

Swipe abstract to rate the paper

- Exciting and Probable
- Exciting and Questionable
- Boring and Probable
- Boring and Questionable

Stochastic Models f...

Cell growth and division are stochastic processes that involve a significant amount of cell-to-cell variation. To connect single cell division dynamics to stochastic population models, new concepts, computational approaches, and modeling approaches are needed. This modeling approach to understand cell growth as well as population fluctuations.

# Upcoming R events

August <-

Next WRUG meeting?

11–15 September <-

**WDSI/IAS Vacation School**

*Principles and Practice of Data Analysis for Reproducible Research in R*

12–14 September <-

**EARL conference** (London)

*Enterprise Applications of the R Language*

Thank you!
